Chad Koslovsky

IT automation, built to be operated

Milliken, Colorado · chad@koslovsky.xyz

Senior IT Engineer | Horizon3.ai

Tailored portfolio: https://horizon3.koslovsky.xyz

01 PROFILE

I build the systems behind the work: client integrations, internal tools and the infrastructure that keeps them useful. My background combines FRII NOC leadership and hands-on escalation work with production application ownership through Technomancy IT. I connect services, make access boundaries explicit and stay responsible after launch.

02 EXPERIENCE

Founder / Product Engineer / Systems Lead · Technomancy IT LLC | Present

Build and operate client systems from the initial need through deployment and ongoing support. Deliver access-controlled automation and connectors spanning Slack, Google Workspace, Atlassian and internal tools.

Implement OAuth/OIDC, PKCE, SAML/SCIM and token workflows in client products, with tenant-aware identity, policy and observability across shared services. Clients call me directly when systems need attention.

Senior Systems Engineer / Datacenter Architect · Front Range Internet Inc. | 2015-2020

Led the NOC and engineering escalations while building tooling for its operators and hosting/colocation customers. Ran hosted web services, developed in PHP and JavaScript, and handled billing-system development and replacement.

Codified operational procedures, recovery checks and audit evidence; ran SOC 1 and SOC 2 audits. Migrated Hyper-V and ESXi workloads into Docker and Kubernetes alongside smaller server and firewall upgrades.

Systems / Software Engineer · Office Evolution | 2014-2015

Built centralized applications connecting CRM, provisioning, onboarding and service operations across locations. Turned cross-department handoffs into explicit workflows rather than leaving teams to bridge them manually.

Worked with the CEO and CIO and supported architecture across client environments, keeping operational needs connected to the systems being built.

Network & Systems Engineer · PlumChoice / Everon | 2012-2014

Engineered and supported business networks and endpoints in a managed-service environment, with on-call responsibility and direct communication with business owners and users.

Built diagnostic tooling and handled remote monitoring, troubleshooting and antivirus services, connecting technical investigation with the people affected.

Infrastructure and Systems Focal · IBM | 2010-2012

Supported shared enterprise infrastructure, virtualization test labs and hosted desktops, coordinating changes and incidents across teams.

Built automation for audit, backup and compliance work, bringing repeatable checks and operational discipline to shared systems.

03 SELECTED WORK

NOC and customer tooling · Front Range Internet Inc. | 2015–2020

Built tooling for NOC/DevOps teams and hosting/colocation customers while owning engineering escalations. Combined hosted web-service development and billing replacement with the operational work of monitoring, recovery verification and documented procedures.

Connected onboarding and service operations · Office Evolution | 2014–2015

Built shared applications linking CRM, provisioning, onboarding and service operations across locations. Made departmental handoffs explicit in the software so operational work could move through a connected process.

Rules-driven commerce operations · NuPrice · Technomancy client engagement | 2019–2021

Built and operated the full application, connecting marketplace and competitor data to user-defined repricing rules, automated price decisions, monitoring and analytics. Owned accounts, billing, embedded support and technical operations alongside the product.

Identity-aware document workflows · ProofMark · completed client contribution | Client project

Designed signing workflows across identity, document routing, audit history, verification and webhooks. Connected UI, APIs and PostgreSQL-backed data while keeping security-sensitive state and fallback paths explicit.

04 CAPABILITIES

Operational automation: TypeScript, Bash, PowerShell and practical Python scripting · SaaS integrations: APIs, authenticated connectors and tenant-aware shared services · Identity implementation: OAuth/OIDC, PKCE, SAML/SCIM, AWS IAM and Microsoft Entra ID · Production operations: AWS, Azure client environments, Docker, monitoring and recovery verification · Service ownership: NOC escalation, runbooks, onboarding workflows and cross-team handoffs · Infrastructure as code and delivery: Terraform, Git/GitHub, CI/CD and container release paths
